Local Trustmarks

- Make statements on entities (IdP, SP)
  - For example sirtifi
  - Or community trustmarks e.g on top of RAF

- Leverage or share existing statements

- Protocol agnostic

Community Trustmarks

- Nothing new!
  - Feds have been doing this for ages
- Just like CO attributes

- Needed:
  - A CO trust anchor
- Pixie dust

SAML Pixie Dust

- A place to consume existing trust
  - eduGAIN metadata

- A place to add tags to these entities
  - A registry (Jagger, Janus, etc)

- A place to publish and sign enhanced community trust
  - Metadata signing by community

- Community services consume communtiy signed metadata
